

# Positivity Widget

# What it does

- The widget works by grabbing content from a number of predefined locations.
- It pulls down text, images and URLs and they can then be injected into the HTML.
- We used this to add inspirational materials to a slider, which fits in with the Spunout.ie design.

# What now?

- This could be expanded to include a larger variety of sources.
- It can handle video and can connect to a database to get access to more curated posts and images.
